Since being elected to be part of the General Assembly, what have you done to represent the student voice in the chamber and in other relevant circumstances?

The main way that I reach out to those in my constituency is in study groups and when meeting with my lab groups. These small groups give me a more personal experience with the students. These interactions allow me to ask what they would like to see change and how they feel improvements can be made. I am also able to work closely with my lab professors and TAs and

listen to their opinions as well. One point that we have been focusing on is how to make lab programs more easily accessible to students. This is a common issue that arises when wanted to work on lab data at home. The programs are extremely confusing, expensive, and incompatible with most students computers. More broadly, the students that have these difficult, time-consuming majors are eager to find ways to make it easier to balance their workload with extracurriculars and jobs.
